TAREQ KARIMI
DEVELOPER

SUMMARY

- A passionate and adaptable individual who learns quickly on the job
- Skilled at debugging, troubleshooting and resolving software issues thanks to the innate ability to formulate solutions to problems quickly and translate that to code
- Strong problem solving skills as exemplified while finding solutions to software issues at RBC, and through winning chess competitions
- A very well understanding and familiarity of the Software Development LifeCycle, and testing methodologies

EDUCATION

Centennial College
Software Engineering April - 2020

HackerYou
Advanced Javascript and JQuery(Summer Course) 2017

NPower Canada - Software Development and Testing
MTA and ISTQB Certification 2017

University of Ontario Institute of Technology
Electrical Engineering(Partial Completion) 2016

SKILLS

LANGUAGES/PLATFORMS:
Javascript, C#, HTML, CSS, Typescript, JQuery, Angular 2/4
TOOLS:
Github, IBM Bluemix, Trello, HP ALM, Gantt Chart, Visual Studio

VOLUNTEERING

Afghan Professionals of Ontario
Aug 2016 to Jan 2017
- Assisted with event coordination and planning by creating and running activities during events to help Afghan professionals network with one another
- Engaged in conversations within groups to promote more connections by bringing together like-minded people

EMPLOYMENT

RBC
88 Queens Quay - Toronto
Full Stack Developer · May 2017 to Aug 2017
- Developed with Angular 2 and Typescript, Github(source control), Jasmine with Karma(unit tests), Protractor(E2E testing) to revamp RBC's Online Banking for Businesses
- Worked on Front End Development with HTML, CSS to create dynamic web pages components, which met UX and UI requirements.
- Worked on Web Accessibility in order to ensure equal access and equal opportunity to people with disabilities.
- Worked with a DevOps pipeline that would grab code from Github, test via Jenkins, store it and deploy to Bluemix
- Was working in an Agile team using Rally as our kanban, and HP ALM for bug tracking reports from QA
- Attended several talks and Lunch N' Learns regarding Design Thinking, DevOps, Cloud Computing and Blockchain Technology

TradeOpia
Inventory Control Clerk · Oct 2016 to Jan 2017
- Organized thousands of items within the database, following proper database management protocols which reduced all shipment errors to zero
- Handled product orders from different store locations, and resolved all item shortages by keeping track of all the store's stock database
- Received and checked over 50 shipments in organized and efficient manner before distribution to various locations

ACTIVITIES

Dev6 Toronto Hackathon · Developer
Nov 2017
Worked with the Shopify API, a Shopify store, and the Facebook Developer Messenger platform, to create a messenger chat bot. The bot would answer simple frequently asked questions, and would also have the option of displaying items based on what customers would like.

CapitalOne GiftTheCode · Developer
Nov 2017
Worked with a team of data scientists on an application that would take in data in the form of excel, store it, and then do one of two things based on what the user wanted.
- If the data was meant for filtering users, it would take the user to a different page where they could search a person's name, address, phone number, and a couple more fields.
- If the user wanted to see attendees in a graphical visualization, it would display it back in a C3.js chart

RBC's IBM Cloud Innovation Hackathon · Developer
Jun 2017
The task was to harness IBM Watson AI's capabilities into a business solution for RBC Insurance. IBM Watson's Chatbot and Discovery was used to create an application which would ask the user for general questions, and then the user's response would be taken and used with Discovery to give suggestion to RBC chat operators.
